Schedule ˄ tracks the scheduled classes

Scheduled classes vs those that hold

Higher and lower game

→ Import the logo

→ Generate the random data using choice

→ Make b the new a, by keeping a generate by outside the
while loop at first and make to a in the loop,

→ check if the followers count is (and user guess is correct
with nested if statement

- if correct keep playing & show score and if not
correct end the game.

Coffee machine
